ZEESHAN SAEED

Software Engineer | Data Structures & Algorithms | Generative AI Integration

Hyderabad, India | +91 7569748912 | saeedzeeshan2003@gmail.com | LinkedIn | Portfolio | GitHub | LeetCode

SUMMARY

Software Engineer with strong fundamentals in Data Structures, Algorithms, and scalable backend architecture, alongside extensive full-stack development experience. Shipped 6+ production-grade and AI-integrated systems—spanning sub-5ms in-memory search engines, high-concurrency transactional platforms, and computer vision models. Currently architecting resilient RESTful APIs, optimizing database pipelines, and applying end-to-end automated testing as a Software Developer Intern.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, C

Frontend: React.js, React Native, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, RESTful API Design

Databases: MongoDB, SQL, PostgreSQL / Supabase

AI / ML: LLM & RAG Integration, Generative AI, TensorFlow, OpenCV, Pandas, NumPy

Tools & Cloud: Git, GitHub, AWS, Docker, Postman, Jest, Twilio API

Concepts: Data Structures & Algorithms, System Design, Agile/SDLC, Unit Testing, Code Review

EXPERIENCE

Software Developer Intern | *AccioJob* *May 2026 – Present*

- Architected 14+ RESTful endpoints in Node.js/Express with JWT authentication and RBAC; optimized MongoDB aggregation pipelines and indexing strategies, **decreasing average API response latency by 32%**.
- Developed modular React.js UI workflows utilizing custom hooks and global state management, cutting redundant re-renders and improving client-side load time across high-traffic views.

PROJECTS

Aegis Ultimate — *Private Search Engine & Chromium Browser | GitHub* *JavaScript, Node.js, Express.js*

- Built and open-sourced a **zero-logging private search engine** paired with a standalone Chromium browser — strips telemetry, ads, and trackers while running entirely in volatile RAM, persisting no search history or IP logs to disk.
- Engineered an in-memory **BM25 ranking engine** over local documents achieving **sub-5ms query latency**, backed by an autonomous crawler with offline inverted indexing and a Perplexity-style LLM synthesis layer with grounded bracket citations.
- Shipped a Web Time Machine (Archive.today/Wayback fallback), global spotlight hotkey, split-screen tab comparison, and one-click session incinerator — validated by **87/87 automated tests across 10 suites (100% coverage)**.

Full-Stack Food Delivery Platform — *Group Ordering & Surplus Matching | GitHub* *MongoDB, Express.js, React, Node.js*

- Built a multi-app food delivery platform supporting **group ordering with split billing**, consolidating multi-party payments into a single synchronized transaction and cutting group checkout time by ~40%.
- Designed a real-time **surplus-food matching engine** that pairs excess restaurant inventory with nearby demand through live listings, reducing avoidable food wastage.
- Built and documented RESTful APIs across ordering, billing, and inventory modules with a responsive React front end, maintaining consistent data flow between services.

Brain Tumour Detection Model — *CNN Medical Imaging Classifier | GitHub* *Python, TensorFlow, OpenCV, Plotly*

- Trained a convolutional neural network (TensorFlow) to classify MRI scans for tumour presence, applying OpenCV preprocessing (noise reduction, normalization) to improve input quality. Achieved **94.2% validation accuracy (0.93 F1-score) across 3,000+ MRI scans.**
- Implemented **Grad-CAM (Gradient-weighted Class Activation Mapping)** to generate visual heatmaps over MRI slices, enabling explainability and verification of predicted regions of interest.
- Containerized model inference within a **FastAPI** microservice, benchmarking input image batching to achieve **low-latency predictions under 120ms.**

College ERP — *Student & Administration Management System | GitHub* *MERN Stack, Twilio API*

- **Engineered a MERN-stack ERP system** digitizing attendance, grading, and records; implemented strict **RBAC across 4 tiers** (Admin, Faculty, Student, Parent) and optimized queries to deliver sub-100ms record lookups.
- **Automated asynchronous event-driven SMS alerts** via Twilio API for critical student notifications and attendance warnings, integrating batch dispatching to handle peak campus broadcast events reliably

EDUCATION

Osmania University (New Science Degree College), Hyderabad — *BCA | CGPA: 8.43 / 10* *Aug 2024 – Jun 2027*

Relevant coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering

CERTIFICATIONS

AWS Certified Machine Learning | Software Engineer (HackerRank) | AWS Cloud Practitioner Essentials | Snowflake Generative AI Professional
